Limitations:

- Missing data value in some months
- A limited time frame for analysis might not capture the full scope of trends or patterns.

Recommendations:

- Collect more data to get more insights about reason why customers cancel/reject orders.
- Track if backordered orders were completed or not to make revenue performance analysis more accurate.
- Having information on the distance between customers and the company, there is an opportunity to optimize freight costs, ultimately reducing additional expenses by offering various delivery methods
- Record data continuously.
